

EXHIBIT F

IN THE UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF ILLINOIS

MARK HALE, TODD SHADLE, and
LAURIE LOGER, on behalf of themselves and
all others similarly situated,

Plaintiffs

v.

STATE FARM MUTUAL AUTOMOBILE
INSURANCE COMPANY, EDWARD
MURNANE, and WILLIAM G. SHEPHERD,

Defendants.

Case No. 3:12-cv-00660-DRH-SCW

Judge David R. Herndon

Magistrate Judge Stephen C. Williams

**DECLARATION OF BRIAN T. FITZPATRICK IN SUPPORT OF PLAINTIFFS’
MOTION FOR ATTORNEYS’ FEES AND COSTS**

I. BACKGROUND AND QUALIFICATIONS

1. My name is Brian Fitzpatrick and I am a Visiting Professor at Harvard Law School. I am also a Professor of Law at Vanderbilt University in Nashville, Tennessee. I joined the Vanderbilt law faculty in 2007, after serving as the John M. Olin Fellow at New York University School of Law in 2005 and 2006. I graduated from Harvard Law School in 2000. After law school, I served as a law clerk to The Honorable Diarmuid O’Scannlain on the United States Court of Appeals for the Ninth Circuit and to The Honorable Antonin Scalia on the Supreme Court of the United States. I also practiced law for several years in Washington, D.C., at Sidley Austin LLP. My C.V. is attached as Exhibit 1.

2. My teaching and research at Vanderbilt have focused on class action litigation. I teach the Civil Procedure, Federal Courts, and Complex Litigation courses at Vanderbilt. In addition, I have published a number of articles on class action litigation in such journals as the

University of Pennsylvania Law Review, the Journal of Empirical Legal Studies, the Vanderbilt Law Review, the NYU Journal of Law & Business, and the University of Arizona Law Review. My work has been cited by numerous courts, scholars, and media outlets such as the New York Times, USA Today, and Wall Street Journal. I have also been invited to speak at symposia and other events about class action litigation, such as the ABA National Institute on Class Actions in 2011, 2015, 2016, and 2017, and the ABA Annual Meeting in 2012. Since 2010, I have also served on the Executive Committee of the Litigation Practice Group of the Federalist Society for Law & Public Policy Studies. I was elected to the membership of the American Law Institute in 2015.

3. In December 2010, I published an article in the Journal of Empirical Legal Studies entitled *An Empirical Study of Class Action Settlements and Their Fee Awards*, 7 J. Empirical L. Stud. 811 (2010) (hereinafter “Empirical Study”). This article is what I believe to be the most comprehensive examination of federal class action settlements and attorneys’ fees that has ever been published. Unlike other studies of class actions, which have been confined to securities cases or have been based on samples of cases that were not intended to be representative of the whole (such as settlements approved in published opinions), my study attempted to examine every class action settlement approved by a federal court over a two-year period, 2006-2007. See *id.* at 812-13. As such, not only is my study an unbiased sample of settlements, but the number of settlements included in my study is several times the number of settlements per year that has been identified in any other empirical study of class action settlements: over this two-year period, I found 688 settlements, including 79 from the Seventh Circuit alone. See *id.* at 817. I presented the findings of my study at the Conference on Empirical Legal Studies at the University of Southern California School of Law in 2009, the

Meeting of the Midwestern Law and Economics Association at the University of Notre Dame in 2009, and before the faculties of many law schools in 2009 and 2010. This study has been relied upon by a number of scholars, testifying experts, and courts, including the Seventh Circuit.¹ I will draw upon this study in this declaration.

Supp. 2d 297, 359 (E.D.N.Y. 2010) (same).

4. In addition to my empirical works, I have also published many papers on how law-and-economics theory affects attorneys and others in class action litigation. *See, e.g.*, Brian T. Fitzpatrick, *The End of Objector Blackmail?*, 62 Vand. L. Rev. 1623 (2009); Brian T. Fitzpatrick, *Do Class Action Lawyers Make Too Little*, 158 U. Pa. L. Rev. 2043 (2010) (hereinafter “Class Action Lawyers”). The culmination of these papers will be a book published next year by the University of Chicago Press entitled THE CONSERVATIVE CASE FOR CLASS ACTIONS. In this book, I endorse the Seventh Circuit’s mimic-the-market approach to compensating class action lawyers (which I describe in more detail below). As I explain in the book, the mimic-the-market approach in part asks courts to draw upon the “Chicago School” of law and economics to determine what rational class members would have contracted to pay class action lawyers had they had the opportunity to do so at the outset of the case.

II. SUMMARY OF OPINIONS

5. I have been asked by Class Counsel to opine on the 33.33% fee they have requested in this case. In formulating my opinion, I reviewed a number of materials, which I list in Appendix 2. As I explain below, I believe Class Counsel’s request easily satisfies the Seventh Circuit’s mimic-the-market test. In particular, my opinions are these:

- The method that class members would have selected *ex ante* to compensate Class Counsel had they had the opportunity to contract with Class Counsel would have been the so-called “percentage” method rather than the so-called “lodestar” method.
- A fee percentage equal to 33.33% is a conservative approximation of what class members would have agreed to pay Class Counsel *ex ante* in this case had they had the opportunity to contract with Class Counsel and is therefore a reasonable request under the facts of this case.

- Class members would not have contracted to pay Class Counsel a smaller percentage if the recovery was large, nor would they have contracted to cap Class Counsel’s percentage at some multiple of Class Counsel’s lodestar.

III. CASE BACKGROUND

6. The background of this case is very well known to the court and I will not repeat it here except to note the matters that are most important to my opinions in this declaration. In 1997, Class Counsel filed a lawsuit in Illinois state court against State Farm on behalf of a nationwide class of its automobile insureds alleging that it breached its contracts with the class by repairing their cars with so-called “imitation” parts. The class won a trial verdict of over \$1 billion and the verdict was largely affirmed on appeal. State Farm appealed the verdict to the Illinois Supreme Court, where it remained pending for three years. While the case was pending, one of the Justices of the Court retired and an election to replace him was held. The victor in that race was Justice Lloyd Karmeier.

7. The class was generally aware that State Farm had supported Justice Karmeier’s election efforts, and the class filed a motion requesting that he recuse from the appeal of its verdict. State Farm opposed the motion and it was denied. Shortly thereafter, the Court reversed the class’s verdict and decertified the class.

8. All was thought lost, but then, three years later still, the U.S. Supreme Court held in a case from West Virginia that litigants have a due process right to courts untainted by a judge who was elected with significant aid from a litigant. Motivated by this decision and other developments, Class Counsel hired private investigators to further probe State Farm’s involvement in Justice Karmeier’s election. What they found went beyond the newspaper reports—and beyond what State Farm told the Illinois Supreme Court when it opposed the class’s recusal motion. Suffice it to say that State Farm was more heavily involved in the

recruitment of Justice Karmer to be a candidate as well as the financing of his campaign than previously known. Based on this new information, and on additional facts, the original class filed a new lawsuit in this court alleging that State Farm and others conspired to commit fraud in violation of the federal Racketeering, Influencing, and Corrupt Organizations Act (“RICO”). After more than six years of heated litigation—including motions to dismiss, extensive discovery, class certification, summary judgment motions, motions in limine, and several interlocutory appeals—this case, too, went to trial. But after the jury was impaneled, the parties agreed to settle the case for \$250 million and the trial was suspended.

9. On September 4, 2018, the court gave preliminary approval to this settlement. The parties are now moving for final approval and Class Counsel is requesting a fee award equal to 33.33% of the settlement fund plus reasonable expenses. As I said and as I will now explain, it is my opinion that this request is a conservative approximation of what would have been found in the *ex ante* market for class representation in this case.

IV. THE SEVENTH CIRCUIT’S APPROACH TO ATTORNEYS’ FEES IN CLASS ACTIONS

10. In class actions, no class members other than the representative plaintiffs select the lawyers who will represent them or enter into agreements setting how much those lawyers will be paid. For everyone else, their lawyers and how much they will pay those lawyers are imposed upon them by a court. The Seventh Circuit is unique among federal circuits in that it requires district courts to hypothesize a market for legal services when it makes these decisions. *See, e.g., Americana Art China v. Foxfire Printing & Packaging, Inc.*, 743 F.3d 243, 246 (7th Cir. 2014) (“[W]e always seek to replicate the market value of an attorney’s services”); *Silverman v. Motorola Solutions, Inc.*, 739 F.3d 956, 957 (7th Cir. 2013) (“[A]ttorneys’ fees in class actions should approximate the market rate that prevails between willing buyers and willing

sellers of legal services.”); *Williams v. Rohm & Haas Pension Plan*, 658 F.3d 629, 636 (7th Cir. 2011) (“When attorney’s fees are deducted from class damages, the district court must try to assign fees that mimic a hypothetical *ex ante* bargain between the class and its attorneys.”); *Sutton v. Bernard*, 504 F.3d 688, 693 (7th Cir. 2007) (“Because the court chose to wait until the end of litigation, it was required to set the fee by estimating what the parties would have agreed to had negotiations occurred at the outset.”); *In re Synthroid Marketing Litig.*, 264 F.3d 712, 718 (“*In re Synthroid P*”) (“We have held repeatedly that, when deciding on appropriate fee levels in common-fund cases, courts must do their best to award counsel the market price for legal services . . .”).²

11. There are essentially two ways to hypothesize the market. One way is to look at what people do when they contract for legal services voluntarily and use that information to estimate what class members would have done here. *See, e.g., In re Synthroid Marketing Litigation*, 325 F.3d 974, 976 (7th Cir. 2003) (“*In re Synthroid IP*”) (using fee contracts from

² An alternative to hypothesizing a market for class legal services is to *create* a market by auctioning off the class counsel position. Although theoretically appealing, there are many practical problems with auctioning off class counsel and it is never attempted any more (and was not attempted in this case). *See Fitzpatrick, Class Action Lawyers, supra*, at 2064. In years past, the Seventh Circuit instructed district courts to at least examine fee contracts that resulted from auctions for class counsel in similar cases when hypothesizing a market for class legal services, *see Rohm & Haas*, 658 F.3d at 635; *Sutton*, 504 F.3d at 692 n.2; *Taubenfeld v. AON Corp.*, 415 F.3d at 599; *In re Synthroid I*, 264 F.3d at 719, but, given that auctions are not used anymore (and were never used much even in past years), the Seventh Circuit has since cast doubt on this consideration, *see Silverman*, 739 F.3d at 957-58 (“In many markets competition proceeds by auction. But . . . solvent litigants do not select their own lawyers by holding auctions, because auctions do not work well unless a standard unit of quality can be defined and its delivery verified. There is no ‘standard quantity’ of legal services, and verification is difficult if not impossible.”). Indeed, I am not aware of a single auction for class counsel in a RICO case. As such, I will not consider auction data in this declaration.

large-stakes class members); *In re Synthroid I*, 264 F.3d at 719-20 (instructing courts to examine “actual agreements” between large-stakes class members and their attorneys); *Sutton*, 504 F.3d at 692 n.2 (“actual fee agreements”); *Rohm & Haas*, 658 F.3d at 635 (“actual fee contracts that were privately negotiated for similar litigation”); *Taubenfeld v. AON Corp.*, 415 F.3d 597, 599 (7th Cir. 2005) (same). I will draw upon this information below, but it is only of limited use in cases like this one where class members have what scholars call “negative expected value claims”—claims so small that they would not be economically rational to bring on their own, and, therefore, so small that there is no similar voluntary market to draw from. Thus, the second way to hypothesize a market: assume class members are rational and would have wanted to foster incentives in their lawyers to maximize their recoveries, then ask how such people would have wanted to structure their fee arrangements. *See, e.g., In re Synthroid I*, 264 F.3d 712 (Easterbrook, J.) (using economic theory to select among fee arrangements for Class Counsel); *See Williams v. Rohm & Haas Pension Plan*, 658 F.3d 629, 636 (7th Cir. 2011) (Easterbrook, J.) (same). This is where the “Chicago School” of law and economics is helpful. I will draw upon this analysis below as well.

V. WHAT METHOD WOULD CLASS MEMBERS HAVE SELECTED TO COMPENSATE CLASS COUNSEL?

12. Let me turn first to the best method to calculate attorneys’ fees if we wish to mimic the market. There are basically two choices. The first choice is the “percentage” method, where Class Counsel is simply awarded a percentage of whatever they recover for the class. The second choice is the “lodestar” method, where Class Counsel is paid a reasonable hourly rate for the number of reasonable hours they worked on the case, enhanced by a multiplier to compensate Class Counsel for risk and other considerations. *See Fitzpatrick, Class Action Lawyers, supra*, at 2051; *Fitzpatrick, Empirical Study, supra*, at 832. Although courts in the Seventh Circuit have

discretion to use either the lodestar method or the percentage method in awarding attorneys' fees in common fund class actions, *see Americana Art*, 743 F.3d at 247 (“[T]he choice of methods is discretionary.”), the evidence from both voluntary fee contracts in the market and rational-actor models from law-and-economics theory suggest that the percentage method is the better formula in most class actions, including this one.

13. First, as the Seventh Circuit has already recognized, when plaintiffs voluntarily hire lawyers on contingency—and especially when it is difficult for plaintiffs to monitor the work of their lawyers—they usually pay their lawyers a percentage of any recovery as opposed to an hourly rate. *See In re Synthroid II*, 325 F.3d at 979 (“Contingent-fee arrangements are used when it is difficult to monitor counsel closely; otherwise some different arrangement, such as hourly rates, is superior.”). It is therefore unsurprising that, in my empirical study, I found that the vast majority of courts in the Seventh Circuit (like other Circuits) use the percentage formula rather than the lodestar formula to set fees in class actions. *See Fitzpatrick, Empirical Study, supra*, at 832 (finding the lodestar method used in only 12% of class action settlements nationwide). The other large-scale empirical study of class action fee awards agrees. *See, e.g., Theodore Eisenberg et al., Attorneys’ Fees in Class Actions: 2009-2013*, 92 N.Y.U. Law Review 937, 945 (2017) (hereinafter “Eisenberg-Miller 2017”) (finding the lodestar method used nationwide only 6.29% of the time from 2009-2013, down from 13.6% from 1993-2002 and 9.6% from 2003-2008). Nothing about this case suggests that it is outside this norm. It is well known that, when laypersons like the class members here hire lawyers to bring consumer lawsuits on contingency, they agree to compensate them as a percentage of their recoveries. *SEE HERBERT M. KRITZER, RISKS, REPUTATIONS, AND REWARDS: CONTINGENCY FEE PRACTICE IN THE UNITED STATES* 36 (2004). Indeed, I have seen the agreements the representative class members

here struck with Class Counsel; they all agreed to compensate them with a percentage of their recoveries.

14. Second, the reason why plaintiffs—especially those who cannot monitor their lawyers—pick the percentage method is because it is what rational actors would do to give their lawyers the best incentives to maximize their recoveries. It is easy to see why. The percentage method pays lawyers more the more they recover for their clients. The lodestar method, by contrast, pays lawyers the same regardless of how much they recover. Instead, the lodestar method pays lawyers more the more they work. Rational plaintiffs would want to enter fee arrangements that give their lawyers incentives to recover as much as they can as quickly as they can (i.e., the percentage method) rather than arrangements that give them incentives to drag cases on and to be indifferent as to recovery (i.e., the lodestar method). Class members should receive no less.³ See *In re Synthroid II*, 325 F.3d at 979 (Easterbrook, J.) (explaining preference for percentage method); Richard Epstein, *Class Actions: The Need for a Hard Second Look*, 4 Civil Justice Report 9-10 (2002) (“One possible fee arrangement is for the informed client who is capable of monitoring his lawyer to pay an hourly fee. [B]ut whatever is good sense in ordinary litigation, it is stillborn in class action litigation for the simple reason that diffuse class members have no real way to monitor the behavior of their lawyers. [I] think that we can be confident that it is suicidal to allow the lawyers to collect fees on an hourly wage.”).

³ Perhaps the most rational fee method of all—especially, again, when lawyers cannot be monitored well—is to pay lawyers a percentage of the recovery *plus* their lodestar. See Kevin Clermont & Jonathan Currivan, *Improving on the Contingent Fee*, 63 Cornell L. Rev. 529 (1978). But I have never seen a court use this method in the 40 years since Professors Clermont and Currivan published their article.

15. Thus, in my opinion, a hypothetical *ex ante* market for legal representation in this case would have led class members to compensate their lawyers using the percentage method.

VI. WHAT FEE PERCENTAGE WOULD CLASS MEMBERS HAVE SELECTED *EX ANTE*?

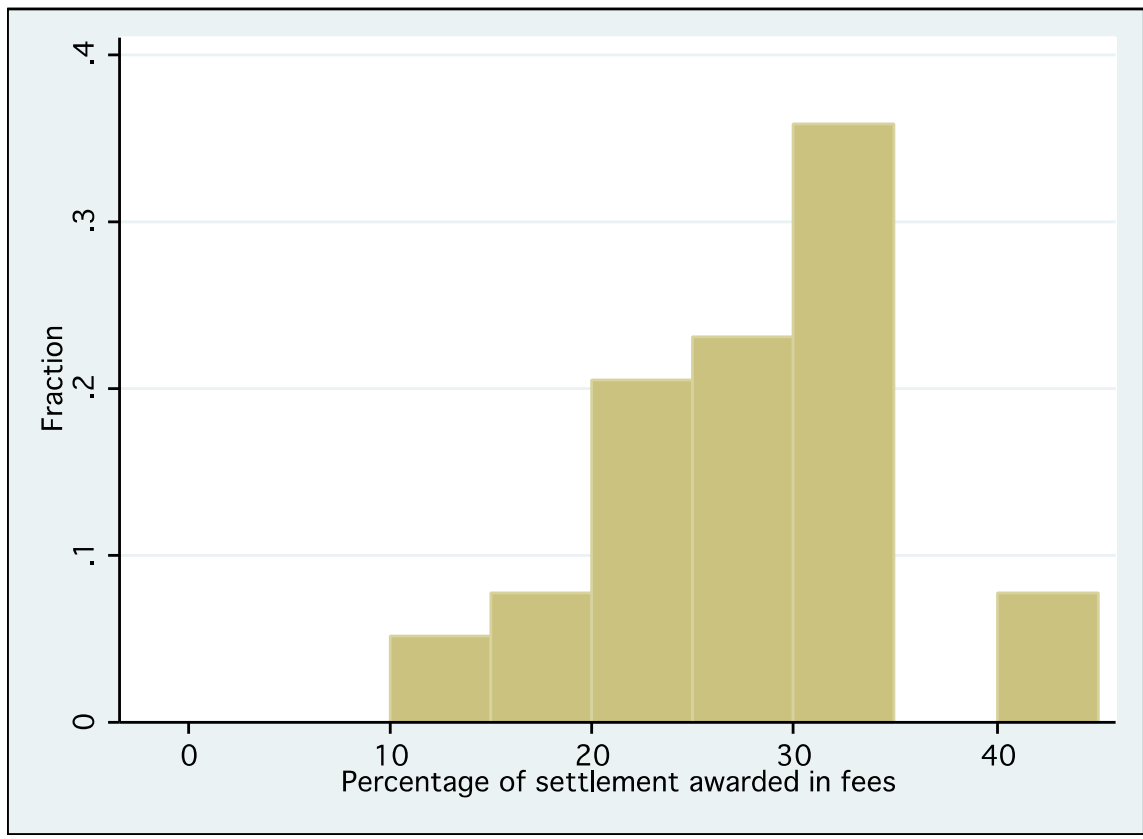

16. In my opinion, Class Counsel's request for 33.33% is not only a good approximation of what class members would have agreed to, but it is a very conservative one.

17. To begin with, 33.33% is equal to or less than what most people agree to pay when they hire lawyers in the free market. As I noted above, I reviewed the fee agreements that the representative plaintiffs entered into here, and all of the agreements called for 40%, *more* than what Class Counsel is requesting. It is true that none of the representative plaintiffs had much money at stake here. But even when plaintiffs have more at stake, we know they contract for much the same rates. For example, the most famous empirical study of contingency fees—the one I cited above by Professor Kritzer of Wisconsin lawyers—found that the most common fee percentage was 33%, but many agreements called for more than that depending on how far along the case is when it is resolved. SEE KRIZTER, SUPRA, AT 39-40 (finding over 60% of contingency agreements set fees at a flat 33.3% and another third or so set fees at variable rates, usually escalating up to as high as 50% as the case went on); ID. AT 42-43 (canvassing prior studies).

18. It is true that the data from agreements for individual representation are not necessarily good approximations of what would have been agreed to in the market for class representation because there may be economies of scale in class representation that would be passed along to clients in a competitive market. See Fitzpatrick, *Class Action Lawyers*, supra, at 2063. But district courts in this Circuit have found that the market rate for class representation is

only slightly lower than the market rate for individual representation.⁴ I show this in Figure 1, which depicts the distribution of all Seventh Circuit percentage-method fee awards in my empirical study. The figure shows what fraction of settlements (y-axis) had fee awards within each five-point range of fee percentages (x-axis). As the figure shows, a 33.3% fee award would be in the most populous range of awards, 30% (inclusive) to 35%. Indeed, *over forty percent* (i.e., 0.4) of all settlements led to fee awards in this range.

Figure 1: Percentage-method fee awards in the Seventh Circuit, 2006-2007

⁴ I focus on the Seventh Circuit because that is the only Circuit where district courts are instructed to approximate the *ex ante* market rate for lawyering when setting fees in class actions. But even if one looks beyond the Seventh Circuit, class counsel’s fee requests still are within the mainstream. For example, in my empirical study, I found the most common awards nationwide were 25%, 30%, and 33%, with average and median percentages 25.4% and 25%, respectively. See Fitzpatrick, *Empirical Study*, *supra* at 833.

19. It is true that the mean (27.4%) and median (29%) fee award in the Seventh Circuit in my study were both below the fee request here. See Fitzpatrick, *Empirical Study*, supra, at 836. But there are two considerations that lead me to conclude that the market rate in this case would have been much higher than these means and medians, and, indeed, probably much higher than even the 33% Class Counsel have requested.

20. First, this case went to trial. It did not go all the way to a trial verdict, but the fact that it even got so far as to begin a trial puts it in very rare company. Professor Rubenstein reports in his Declaration in this case that he maintains a database of 1,187 cases and only 15 of them had at least one day of trial. Rubenstein Decl. ¶ 18. That means this case progressed further than 98.7% of class action cases. *Id.*; see also, e.g., *Recent Trends in Securities Class Action Litigation: 2015 Full-Year Review* 38 (finding that, out of thousands upon thousands of securities fraud class actions over 20 years, only 21 went to trial). Why is this important? It is important because we know that plaintiffs in the market for legal representation often pay their lawyers with bifurcated rates that call for a higher percentage if their lawyers have to take their cases to trial, with fees as high as 50% in such circumstances. See, e.g., Herbert Kritzer, *Seven Dogged Myths Concerning Contingency Fees*, 80 Wash U. L. Q. 739, 759 (2002) (finding 31% of contingency fee contracts in Wisconsin with bifurcated rates); David Schwartz, *The Rise of Contingency Fees in Patent Litigation*, 64 Ala. L. Rev. 335, 360 nn. 136-137 (2012) (finding that over 75% of sophisticated patent infringement plaintiffs who retained contingency fee lawyers did so with bifurcated rates). It is therefore unsurprising that Professor Rubenstein has found that courts tend to award higher fee percentages in class actions that go to trial as well. See Rubenstein Decl. ¶ 18. All of this is perfectly consistent with law-and-economics theory: a

rational plaintiff would want to pay his lawyer more to go to trial than to settle early in order to disincentivize his lawyer from settling *too* early for *too* little. See Bruce L. Hay, *Optimal Contingent Fees in A World of Settlement*, 26 J. Legal Stud. 259, 259 (1997) (“[T]he article shows that the client generally benefits from a bifurcated fee structure in which the attorney gets a large fraction of the recovery in the event of trial but a small fraction in the event of settlement.”).

21. Second, the data from voluntary fee agreements and class action fee awards I cited above is very broad. It covers all kinds of cases: easy cases, hard cases, and cases in between. The Seventh Circuit has noted that, in order to mimic the market well, we have to adjust baseline data like this to the particular circumstances that existed at the outset of *this* case. That is, if this case was riskier than the average case, we would have expected the lawyers in a competitive market to demand an above-average fee percentage to take it on. See *Silverman*, 739 F.3d at 958 (affirming above-average fee percentage because district court could have found that the “suit was unusually risky” and “[t]he greater the risk of walking away empty-handed, the higher the award must be to attract competent and energetic counsel”); *Rohm & Haas*, 658 F.3d at 636 (affirming award where district court “assessed the amount of work involved, the risks of nonpayment, and the quality of representation”); *Sutton*, 504 F.3d at 693 (“We have said the market price for legal fees ‘depends in part on the risk of nonpayment a firm agrees to bear, in part on the quality of its performance, in part on the amount of work necessary to resolve the litigation, and in part on the stakes of the case.’”); *Taubenfeld*, 415 F.3d at 600 (affirming fee award where “[t]he district court also evaluated other factors,” including “the quality of legal services rendered” and “degree of risk”). In my view, it is a *gross* understatement to say that this

case involved above-average risks and therefore would have demanded an above-average fee award in a competitive market.

22. To begin with, the legal theory in this case is, to my knowledge, entirely novel: one litigant conspired to deprive the others of fair adjudication of their claims by orchestrating the election of a new judge to hear the case and then lying about having done so. The novelty presented many legal barriers: Did the earlier litigation preclude a new litigation by virtue of *res judicata* or the *Rooker-Feldman* doctrine? Had the RICO statute of limitations run between the first and second litigation? Could the class prove that the election of the new Justice changed the result in the first litigation? Can a tribunal's decision to overturn a judgment establish an "injur[y]" to "business or property" as required by RICO? Were the defendants' alleged misconducts here protected by the First Amendment? If one goes through each step in this litigation decision tree and assigns probabilities of success to the class at each step and then multiplies all of those probabilities together, it becomes quite clear that the risks here were *much* higher than in the typical class action.

23. In addition, the facts to support the theory had to be unearthed entirely by Class Counsel: as I noted above, they had to hire a private investigator to determine whether the theory had any legs at all. This was not a situation where the government discovered wrongdoing or even a situation where a whistleblower came forward with the wrongdoing; Class Counsel discovered the wrongdoing all on their own. This, too, is very rare. Several years ago, three economists studied who uncovers corporate fraud: The government? Private lawyers? Auditors? Corporate Management? Whistleblowers? Others? See Alexander Dyck, et al., *Who Blows the Whistle on Corporate Fraud?*, 65 *The Journal of Finance* 2213 (2010). They found that it was not private lawyers: they were the first to discover fraud only 3% of the time. See *id.* at 2225,

tbl. II(A)(2). (The most frequent discoverer outside of company management were employee whistleblowers. *See id.*).

24. In my opinion, lawyers in a free market would demand better than average rates to take on a case with an entirely novel legal theory that would rely on concealed and difficult to prove facts. The fact that this is one of those cases is confirmed by the fact that no other counsel came forward to compete to represent the class in this case. Again, it is a gross understatement to say that this case was not perceived by anyone—including very experienced class action lawyers—as an easy victory.

25. I am aware that in a Seventh Circuit opinion that cited my empirical study the court said that a 27.5% award of a \$200 million settlement “may be at the outer limit of reasonableness” *Silverman*, 739 F.3d at 959 (Easterbrook, J.). But that statement could have only meant that 27.5% was at the outer limit for the circumstances of that case. The *Silverman* case presented none of the *ex ante* risks of this case (for example, *Silverman* was a securities fraud case, where class certification is relatively perfunctory), and, perhaps even more importantly, did not go to trial. As I noted above, it is very common for clients to pay their lawyers higher fee percentages when cases go to trial as well as consistent with fostering the best incentives to pay them more in such circumstances. In my opinion, Judge Easterbrook (of all judges) would have understood such things and modified his statement appropriately if the case before him had presented the circumstances of this case.

VII. WOULD CLASS MEMBERS HAVE REDUCED THE PERCENTAGE FOR LARGER RECOVERIES OR CAPPED IT BASED ON CLASS COUNSEL’S LODESTAR?

26. It should be noted that the settlement here is very large: there are only a handful of settlements in federal court every year for \$250 million or more. One question that sometimes arises in other Circuits is whether the court should award a *smaller* percentage when the

settlement is *larger*. Indeed, I found in my empirical study that enough courts follow this bigger-is-smaller practice that there is a statistically significant inverse correlation between settlement size and fee award. See Fitzpatrick, *Empirical Study, supra*, at 839; see also Eisenberg-Miller 2017, *supra*, at 948. But the bigger-is-smaller compensation scheme would be so irrational for a plaintiff to enter into that the Seventh Circuit has already squarely rejected it for class actions. See *In re Synthroid I*, 264 F.3d at 718 (Easterbrook, J.) (“Private parties would never contract for such an arrangement, because it would eliminate counsel’s incentive to press for more [money] from the defendants.”). Consider the following example: suppose class counsel could fight moderately hard and settle a class action for \$100 million and receive a 33% fee award or fight very hard and settle for \$150 million but receive a 20% fee award. In this example, class counsel would get a *bigger* fee if they settled for *less*: the \$100 million settlement would lead to a \$33 million fee award whereas the \$150 million would lead to only a \$30 million fee award. This is the very definition of perverse incentives under a Chicago School analysis.

27. A related question is whether the fee percentage should be *tapered* downward in cases that produce bigger settlements. That is, instead of awarding a straight 20% of the entire \$150 million settlement amount in my above example, a court might award 33% of the first \$100 million and 20% of the next \$50 million. The Seventh Circuit has observed that *sophisticated* clients sometimes taper fee percentages in this way as recoveries become large. See *Silverman*, 739 F.3d at 959; *In re Synthroid I*, 264 F.3d at 721. But, in my opinion, it would not be economically rational for plaintiffs who *cannot monitor* their lawyers to contract for such awards for the very same reason such plaintiffs would not want to pay their lawyers the same percentage if they settled early or went to trial: tapering disincentivizes lawyers from working hard for the largest recovery. See *In re Synthroid I*, 264 F.3d at 721 (“[D]eclining marginal percentages . . .

create declining marginal returns to legal work This feature exacerbates the agency costs inherent in any percentage-of-recovery system”); Epstein, *supra*, at 11 (“It has been suggested that the fee . . . be ‘tapered,’ so that the percentage take is reduced with an increase in the size of the class settlement In general, however, this does not seem to be the right approach.”). Rather, a “Chicago School” analysis shows that, if we are to taper at all for clients who cannot monitor, we should taper *upward* not downward. *See, e.g.*, John C. Coffee, Jr., *Understanding the Plaintiff’s Attorney: The Implications of Economic Theory for Private Enforcement of Law Through Class and Derivative Actions*, 86 Colum. L. Rev. 669, 697 (1986) (“[T]he most logical answer to this problem of premature settlement would be to base fees on a graduated, increasing percentage of the recovery formula—one that operates, much like the Internal Revenue Code, to award the plaintiff’s attorney a marginally greater percentage of each defined increment of the recovery.”); Jill E. Fisch, *Lawyers on the Auction Block: Evaluating the Selection of Class Counsel by Auction*, 102 Columbia Law Review 650, 678 (2002) (“[The] last dollars of recovery are generally the most costly to produce.”). Indeed, there are plenty of sophisticated clients who taper in this direction as well. *See, e.g.*, *In re AT & T Corp.*, 455 F.3d 160, 163 (3d Cir. 2006) (describing fee agreement between class counsel and “the lead plaintiff New Hampshire Retirement Systems”: “The formula provided attorneys’ fees would equal 15% of any settlement amount up to \$25 million, 20% of any settlement amount between \$25 million and \$50 million, and 25% of any settlement amount over \$50 million.”).

28. Finally, some courts in other Circuits that use the percentage method “crosscheck” it with class counsel’s lodestar. Only a minority of courts do this, but it is, admittedly, a significant minority. *See* Fitzpatrick, *Empirical Study, supra*, at 833 (finding that only 49% of federal courts consider lodestar when awarding fees with the percentage method);

Eisenberg-Miller 2017, supra, at 945 (finding percentage method with lodestar crosscheck used 38% of the time nationwide versus 54% for percentage method without lodestar crosscheck). Under this approach, the court considers how much of a “multiplier” over class counsel’s lodestar the percentage method would give to class counsel. If the court believes the multiplier is “too big”—that class counsel will reap a “windfall”—then it will cut the percentage down until the multiplier is not too big. Because it would be so economically irrational for a plaintiff who could not monitor his lawyer to contract for this compensation scheme, it, too, has been squarely rejected by the Seventh Circuit. *See Williams v. Rohm & Haas Pension Plan*, 658 F.3d 629, 636 (7th Cir. 2011) (Easterbrook, J.) (“The . . . argument . . . that any percentage fee award exceeding a certain lodestar multiplier is excessive . . . echoes [practices] we rejected [as unlikely to be adopted by rational actors in a free market].”). Consider the following examples. Suppose a lawyer had worked on a case for 5 years and accrued a lodestar of \$1 million. If the lawyer believed that a court would award him a fee of 33% or 2 times his lodestar, whichever was lesser, then he would be completely indifferent between accepting a settlement offer at this point of \$6 million and \$60 million. Needless to say, the incentive to be indifferent as to the size of the settlement is not the incentive class members interested in the maximum recovery would want in their lawyers. Or suppose the lawyer had been offered \$12 million after five years of work. If the lawyer again believed the court would not award a fee of 33% unless it was no more than 2 times his lodestar, the lawyer would want to delay accepting the settlement until he could generate another \$1 million in lodestar and thereby reap the maximum fee. Needless to say again, dragging cases along and churning hours without adding any additional recovery is not the incentive class members would want, either. This is probably why I have never seen a client

voluntarily enter into a fee agreement that compensates a lawyer with a percentage capped by a multiple of the lawyer's lodestar. Class members, again, deserve no less.

29. For all these reasons, it is my opinion that Class Counsel's fee request is a conservative approximation of what would have been found in the *ex ante* market for class representation in this case and is therefore a reasonable request under the facts of this case.

30. My compensation in this matter has been \$895 per hour.
